How will you know your change is correct?

Start with the request. Explain the result.

Keep this question in mind as we begin.

© 2026 Inspire | Confidential

What you will take away

Capabilities

Behavior Clarification System Comprehension Evidence-led Debugging
Responsibility Design Vertical Delivery Bounded AI Delegation
Independent Verification Iterative Group Delivery

Methods

Context Mapping **Specification by Example** **Spec-driven Development**
Test-driven Development Change-based Code Review Refactoring
Hypothesis-driven Debugging **Risk-based Testing** Context Engineering
Living Specification User Story Mapping & MVP Slicing Inspect and Adapt

Knowledge

Program Boundaries Observable Behavior Acceptance Boundaries
Responsibilities & Dependencies HTTP Contracts State & Data
Fault, Erroneous State & Failure Verification Levels Feedback Loops

Technologies

Git Java JUnit 6 IDE Debugger HTTP / JSON Spring Boot SQL / JPA React
TypeScript Playwright CI Pipeline Coding Agent

Learning methods: Concept Mapping • ORID

Your learning journey

Four stages across four weeks

Days 1–5

Local change

Trustworthy Local Change

Days 6–10

Across layers

Vertical Change

Days 11–13

Work with AI

AI-Augmented Engineering

Days 14–20

Team delivery

Group Product Delivery

The stages have different lengths.

© 2026 Inspire | Confidential

Trustworthy Local Change

Days 1–5

Make a small change you can explain and check.

- Clarify the request
- Understand and change the code
- Check and explain the result

Days 1–5
Local change

Days 6–10
Across layers

Days 11–13
Work with AI

Days 14–20
Team delivery

© 2026 Inspire | Confidential

Vertical Change

Days 6–10

Follow one behavior across the interface, service and data.

- Trace inputs and results
- Understand how the parts connect
- Choose checks for the whole behavior

© 2026 Inspire | Confidential

AI-Augmented Engineering

Days 11–13

Delegate implementation. Keep responsibility for the result.

- Define the task and its boundaries
- Review what AI changed
- Verify before accepting the result

Days 1–5
Local change

Days 6–10
Across layers

Days 11–13
Work with AI

Days 14–20
Team delivery

© 2026 Inspire | Confidential

Group Product Delivery

Days 14–20

Work together to deliver and explain a tested product.

- Understand the problem and plan the work
- Build, check and use feedback
- Explain your own contribution

Days 1–5
Local change

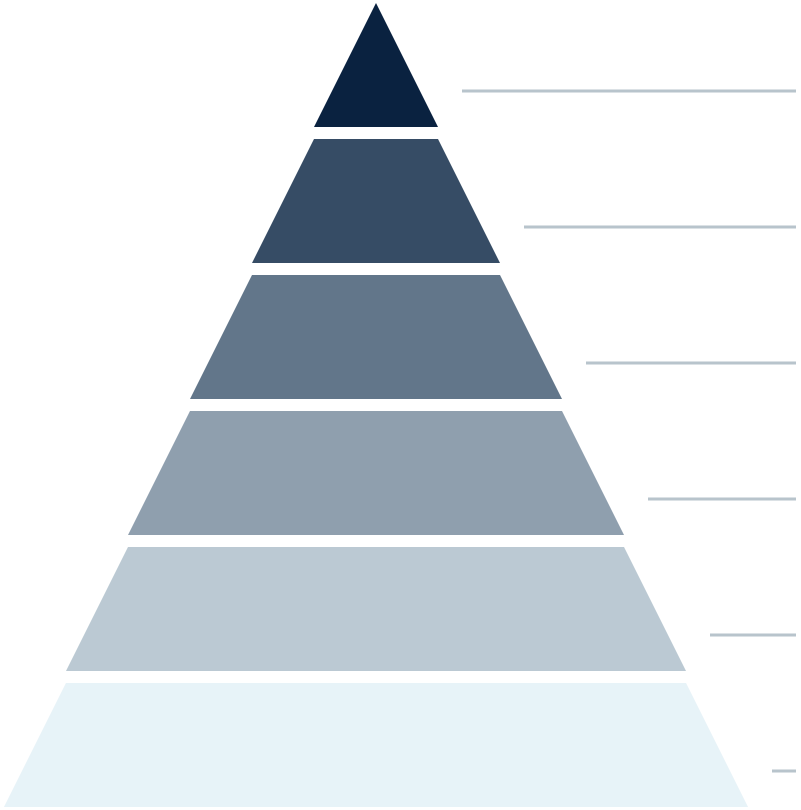

Days 6–10
Across layers

Days 11–13
Work with AI

Days 14–20
Team delivery

© 2026 Inspire | Confidential

Learning goals and methods

Create	Combine ideas into a solution Project-based learning
Evaluate	Judge against clear criteria Self-review • Peer feedback
Analyze	Find parts and relationships Socratic questions • Concept maps
Apply	Use it in a task Deliberate practice • Feedback
Understand	Explain in your own words Feynman Technique • Ask why
Remember	Recall what you learned Active recall • Spaced review

Revised Bloom's taxonomy, 2001 • Methods are our course examples and can support several goals.

© 2026 Inspire | Confidential

When we use AI

Days 1–10

Do most engineering work yourself.

Use AI only in explicitly allowed activities and within their stated scope.

Days 11–20

Use AI in appropriate engineering work.

Keep task boundaries, permissions and independent checks.

The instructor explains the tools and limits before each AI activity.

© 2026 Inspire | Confidential

Your daily schedule

Morning starts	**08:40** (Monday: 09:00)
Lunch break	**12:00–13:30**
Afternoon starts	**13:30**
Classes end	**17:30**

Be ready before class starts.
Short breaks: 10 minutes, as shown in the timetable.

Latest timetable

Scan or open the timetable.
Check it for updates.

afs-2026.github.io/curriculum-pages/#timetable

© 2026 Inspire | Confidential

INSPIRE AI

Homework

Before 22:00

Submit on the day it is assigned.
Earlier submissions are welcome.

Your instructor will explain what to submit and where.

© 2026 Inspire | Confidential

How we assess your performance

Capability

Your work, checks and explanations

Classroom performance

Speaking up, asking questions and taking part

Homework

Completion and quality

Team final showcase

The product, presentation and each person's contribution

© 2026 Inspire | Confidential

What would you like to ask?

Assessment, feedback or homework

We will keep unanswered questions for follow-up.

© 2026 Inspire | Confidential

Find your class and guide

Next, in your own classroom

Meet your group

Get to know your learning partners.

Share your expectations

Bring your goals, concerns and open questions.

© 2026 Inspire | Confidential

INSPIRE AI

Let's join our classrooms

Take your belongings and follow your guide.

10 minutes to move and settle in

© 2026 Inspire | Confidential

Two Truths and a Lie

Get to know your group through three statements about you.

2 True statements + **1** False statement

---

1 / Say your name

2 / Share all three

3 / Guess together

4 / Reveal the answer

Choose things you are comfortable sharing. Your instructor will show one round.

© 2026 Inspire | Confidential

Prepare Your Three Statements

Work on your own • 3 minutes

1 _____

2 _____

3 _____

Two true. One false.

Use your interests, everyday life or past experiences.

Put them in any order.
Keep the answer to yourself.

Simple facts are enough. Number the statements so others can choose.

© 2026 Inspire | Confidential

One Turn Each

Play in your group • 18 minutes

1 **Share**
Say your name and read all three statements.

2 **Guess together**
Show 1, 2 or 3 for the statement you think is false.

3 **Reveal**
Give the answer and briefly add a true detail.

Everyone gets a turn. Your coach will keep time.

© 2026 Inspire | Confidential

Parking Lot

Work in your group with your coach. **One idea per note.**

A place for learning goals, concerns and questions to revisit.

Expectation

What I want to learn

Concern

What I am unsure about

Revisit Later

Questions that still need an answer

© 2026 Inspire | Confidential

Your Learning Goals and Concerns

Write your most important idea first • 3 minutes

> Expectation
>
> I want to be able to …

> Concern
>
> I am unsure about …

Post it in your group's ParkingLot. Add your name if you want individual follow-up.

© 2026 Inspire | Confidential

Make Your Meaning Clear

Explain unclear words with your coach.

Example wording

“Learn AI”

What would you like to use AI to do?

Explain in your own words. Check that the note still says what you mean.

© 2026 Inspire | Confidential

Do the grouped notes still say what you mean?

Check with your coach.
Keep unanswered questions visible.

© 2026 Inspire | Confidential

Our Learning Expectations

Let's look at our ParkingLot together.

01 What do we want to be able to do?

02 Where will we practise it?

03 What still needs an answer?

Your instructor will connect the themes with the course and keep open questions for follow-up.

© 2026 Inspire | Confidential

After the break: Concept maps

Show how your ideas connect.

Keep your goals and questions in ParkingLot.

© 2026 Inspire | Confidential

Concept Maps

Show how ideas connect, so you can explain and improve your understanding.

Birds **Feathers** **Flight** **Food**

What do these words tell us about their relationships?

A concept map connects concepts with words that explain their relationships.

© 2026 Inspire | Confidential

Name Concepts with Short Labels

Concepts name ideas about objects or events.

Objects	Events
Birds • Feathers • Food	Flight • Migration • Growth

Feathers	A concept label
Birds have feathers.	A statement about two concepts

Use a word or a short phrase for each concept. Put the relationship on the connecting line.

© 2026 Inspire | Confidential

A Focus Question

A focus question defines what the map should help explain.

What are birds?

Feathers • Flight • Food • Energy

Features and how they relate

Where can we watch birds?

Habitats • Locations • Seasons

Places and conditions for observing birds

A different focus question changes which concepts and relationships belong in the map.

For our demonstration: What are birds? Choose concepts that help answer this question.

© 2026 Inspire | Confidential

Choose and Arrange Concepts

Focus question: What are birds?

Still a candidate

Eggs

Birds

Feathers

Food

Flight

Energy

R Draw a rectangle | **Enter** Add text | **Esc** Finish | **V** Select and move

Start broad and place related ideas nearby. Eggs can stay in the candidate area; use only concepts you can connect meaningfully.

© 2026 Inspire | Confidential

Linking Words Give Meaning

Concepts	**Birds**	**Feathers**	
A line	**Birds**	→	**Feathers**
A proposition	**Birds**	have →	**Feathers**

“Birds have feathers.”

A proposition joins concepts with linking words to make a meaningful statement.

A Draw an arrow | **V** Select it | **Enter** Add linking words | **Esc** Finish

Read along the arrow. It shows reading direction; it does not automatically mean cause.

© 2026 Inspire | Confidential

A Draft Relationship

Draft to check The claim below needs checking.

"All birds can fly."

The sentence is readable.
Is the claim accurate?

Look for a counterexample before accepting this draft.

© 2026 Inspire | Confidential

A Counterexample Changes the Claim

Penguins

Penguins are birds.
They cannot fly.

“Not all birds can fly.”

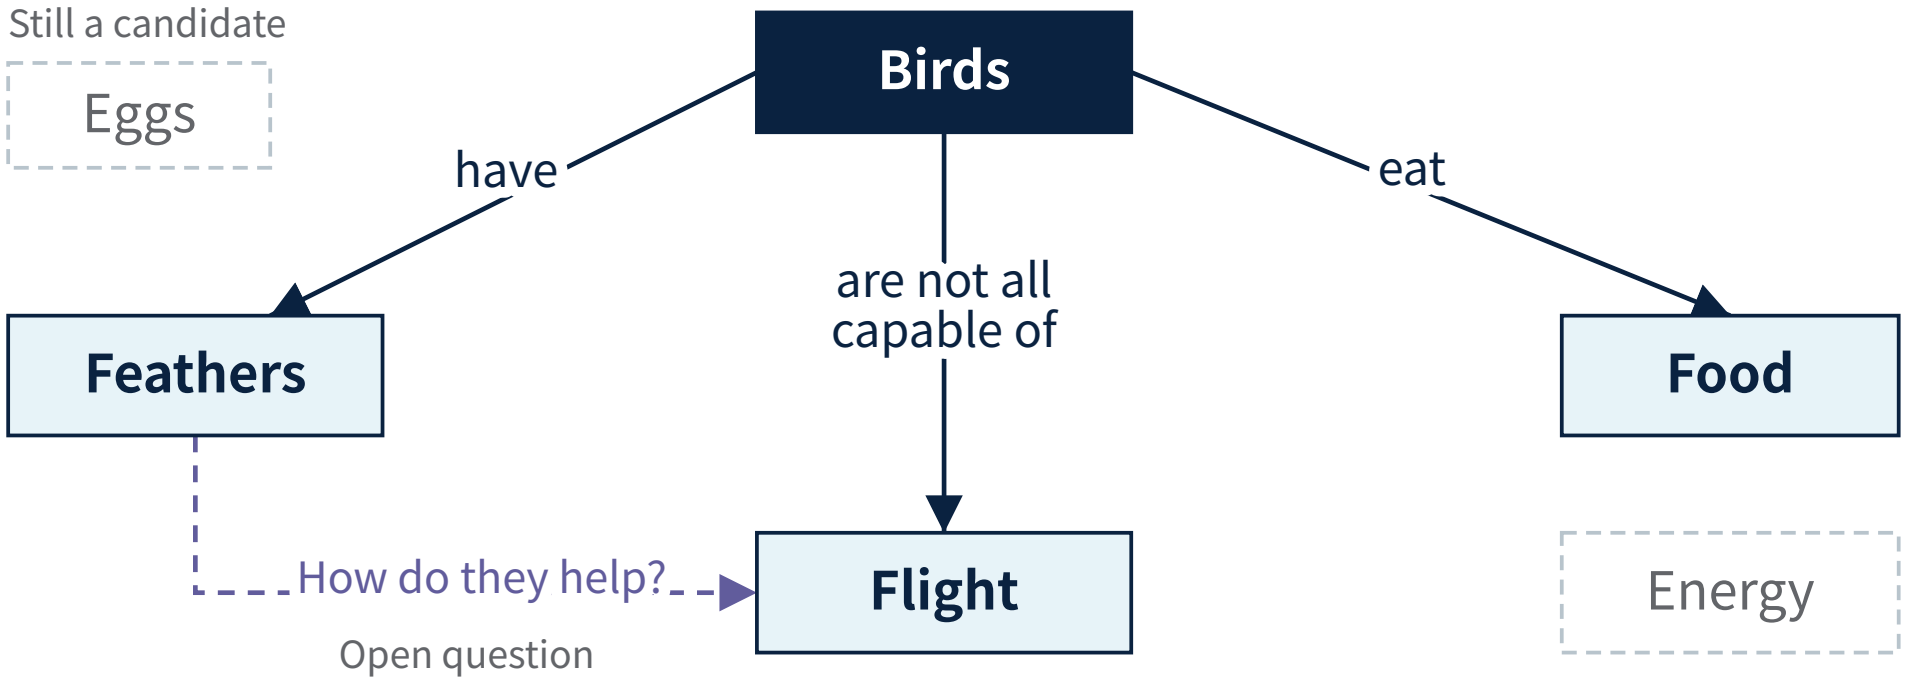

V Select the arrow | **Enter** Edit the words | **Esc** Finish

Revise the linking words. Then move Flight and check that the arrow still connects correctly.

© 2026 Inspire | Confidential

Keep an Uncertain Relationship Visible

Focus question: What are birds?

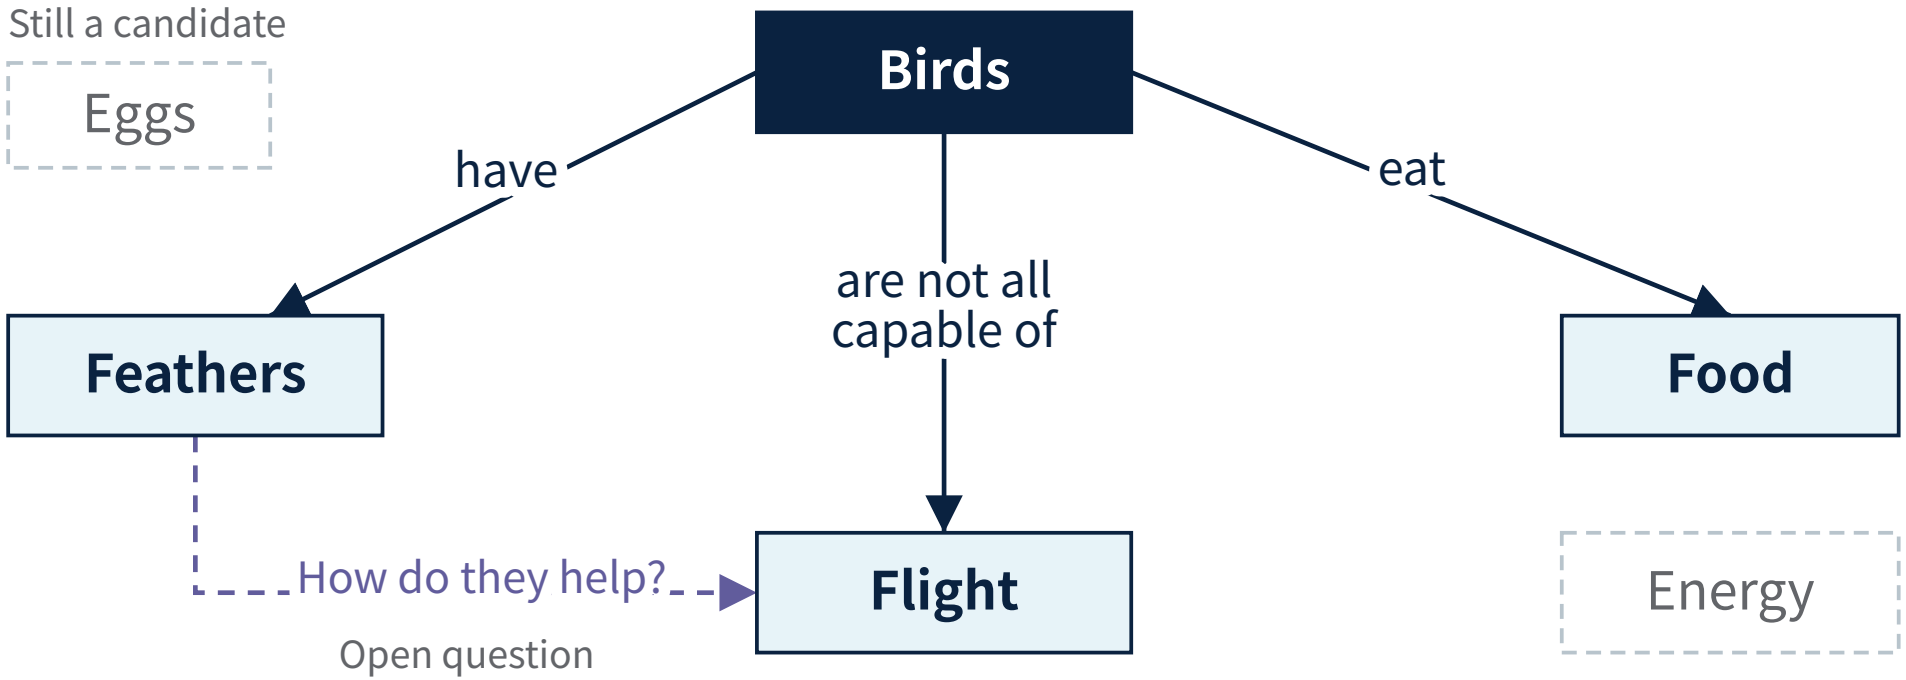

To investigate: how feathers help flight, and when this applies.

A dashed line and a question mark show an open question here. Return to it with more information.

© 2026 Inspire | Confidential

How Can the Branches Connect?

How can Energy connect Food and Flight?

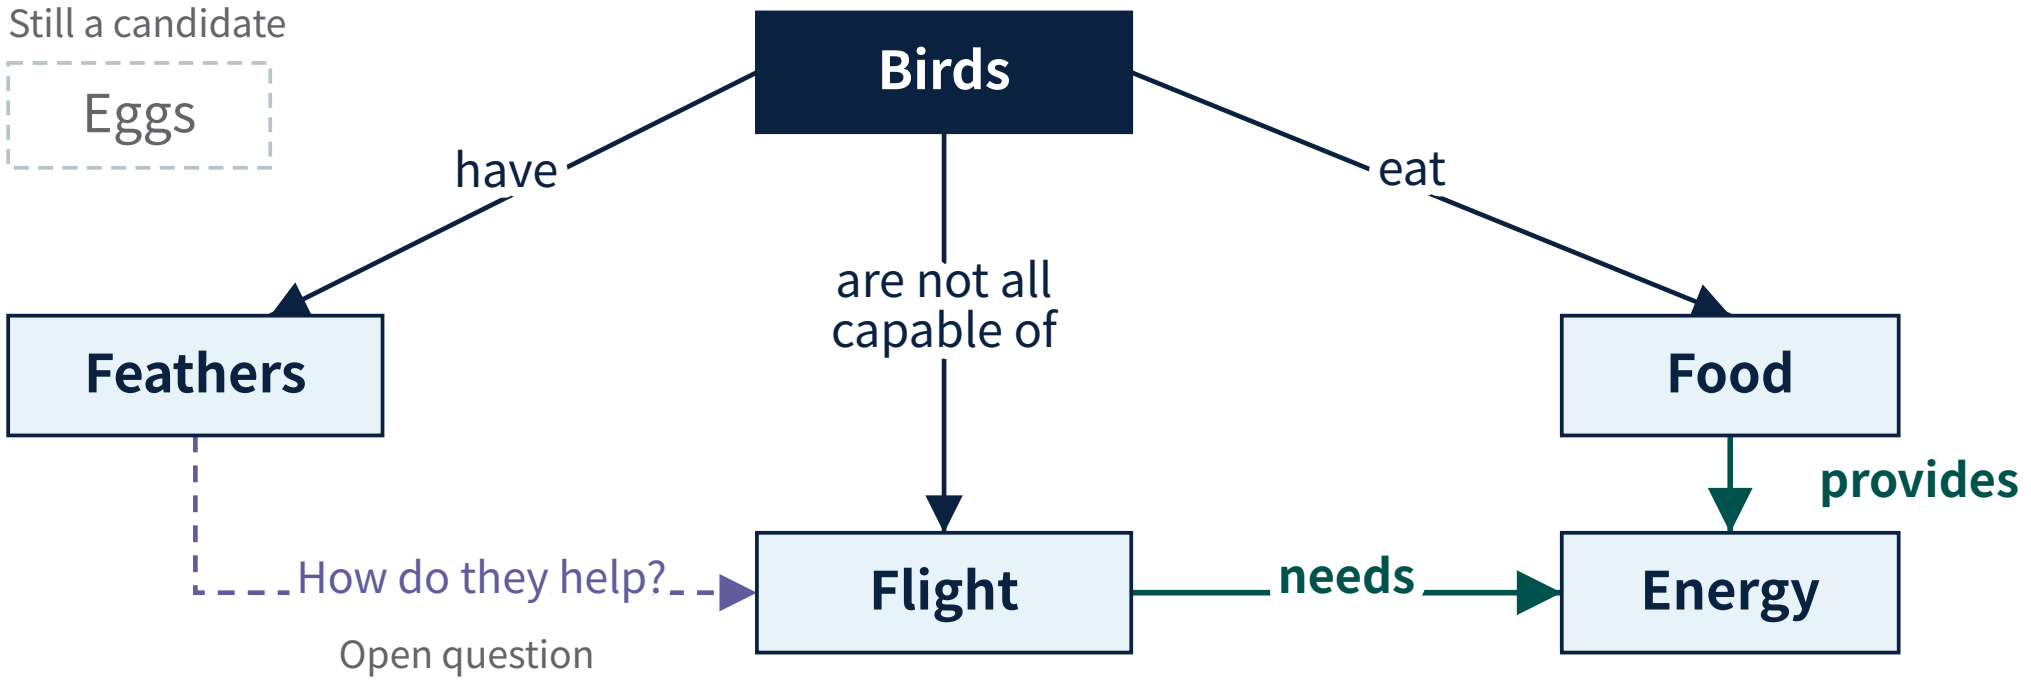

Think for 20 seconds. Explain the relationships as sentences.

Use the same Energy concept to connect the two branches.

© 2026 Inspire | Confidential

Food, Flight and Energy

Focus question: What are birds?

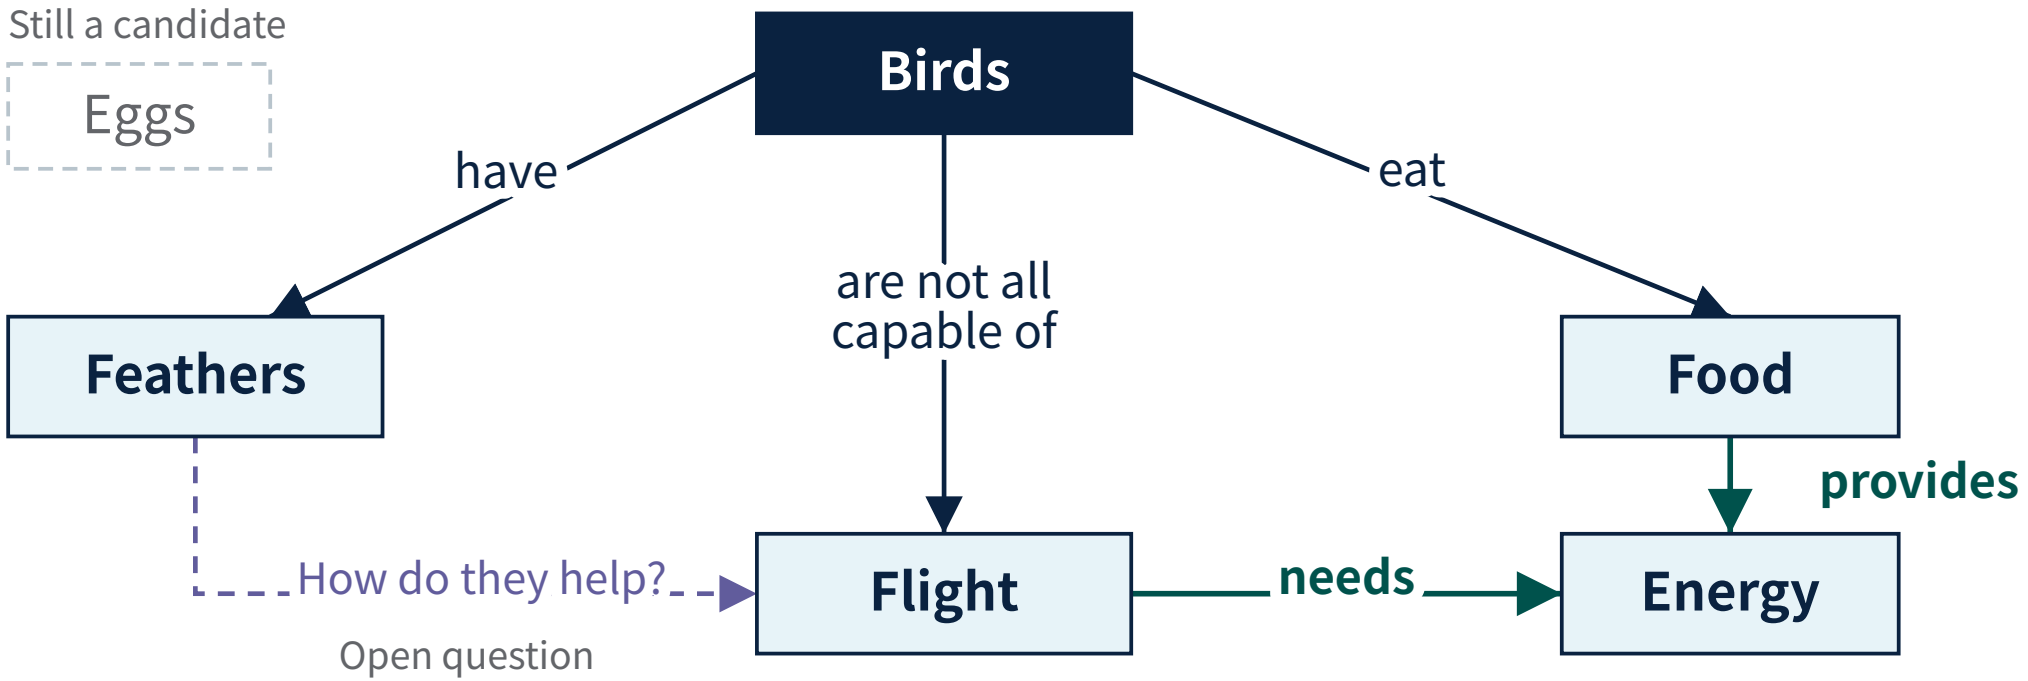

Food provides energy. Flight needs energy.

This cross-link connects two branches through the same Energy concept.

© 2026 Inspire | Confidential

Find the Four Elements

Focus question: What are birds?

Focus question **Concepts** **Linking words** **One proposition**

Point to each element. Read one complete proposition aloud.

© 2026 Inspire | Confidential

Build, Read and Revise Your Map

1 Set a focus question

Say what the map should explain.

2 List key concepts

Use short labels for your ideas.

3 Arrange the concepts

Start broad. Place related ideas nearby.

4 Connect and read

Add linking words. Read each statement.

5 Revise the structure

Check claims, links and open questions.

6 Add examples as needed

Use a specific case to clarify a concept.

Return to any step as your understanding changes. A candidate concept does not have to enter the final map.

© 2026 Inspire | Confidential

A Checklist for Reading Your Map

Clear concepts	Does each label say what you mean?
Readable links	Can you read each relationship as a sentence?
Accurate meaning	Check the claim. Revise it when an example challenges it.
Visible questions	Mark what you still need to find out.

© 2026 Inspire | Confidential

Save and Reopen the Editable Map

1 Save the file

Save to... then Save to file

`birds-method-demo.excalidraw`

---

2 Reopen it

Open then choose the saved file

---

3 Check an editable relationship

Select an arrow and edit its linking words.

For viewing: Export image... gives a PNG; Save to... / Export to Link gives a read-only link.
Keep the .excalidraw file so you can revise your map.

© 2026 Inspire | Confidential

One Question Can Lead to Different Maps

Must our maps be the same?

People bring different experiences, concepts and questions.

Maps may differ

Concept choices
Level of detail
Layout and connections

Check each relationship

Does it answer the focus question?
Can you read the meaning clearly?
What supports the claim?

Explain your choices. Listen to another view. Revise when a question or new evidence helps.

© 2026 Inspire | Confidential

What is AI coding, as you understand it now?

Use your current ideas and experiences.
Keep unanswered questions visible.

Next: draw your own map, discuss it in your group, then revise it.

© 2026 Inspire | Confidential

Your AI Coding Concept Map

15 min	**15** min	**10** min
Draw on your own	Discuss in your group	Revise your own map

What is AI coding, as you understand it now?

1. Write the focus question at the top of your own canvas.
2. Choose your concepts and add meaningful linking words.
3. Save your editable file. Choose one relationship to explain.

Open excalidraw.com. If access fails, use paper and the same checklist. Keep unfinished work.

© 2026 Inspire | Confidential

Group Feedback on Your Drafts

15 min
Draw on your own

15 min
Discuss in your group

10 min
Revise your own map

Author

Read one relationship.

Explain what you mean.

One listener responds first

“So you mean…”

Check the meaning.
Ask a specific question if needed.

Author: decide what to clarify, change, keep or question.

Everyone explains one relationship. Your coach will divide the time.
Understand the author's meaning before discussing whether you agree.

© 2026 Inspire | Confidential

Revise Your Own Map

15 min	15 min	10 min
Draw on your own	Discuss in your group	Revise your own map

Use the feedback and checklist to decide what to change or keep.

Clarify a relationship	Make the labels, direction or linking words more precise.
Explain your decision	If you keep the wording, explain why.
Keep open questions	Mark uncertainty. Save your revised editable file.

Continue with your own personal map.

© 2026 Inspire | Confidential

Save and Choose the Showcase Maps

Final 3 minutes of revision

1. Everyone saves their own revised map.
2. Each group selects one personal map, with its author's agreement.
3. The author chooses one relationship and one open question.

With three groups, another willing author takes the fourth presentation.

Confirm a viewable copy with your coach. After the break: four presentations of four minutes.

© 2026 Inspire | Confidential

Concept Map Showcase

1 min

Opening

4 × 4 min

Four individual maps

3 min

Feedback and handoff

One personal map.
One relationship.
One open question.

Each group presents once. With three groups, another willing author takes the fourth presentation. The four-minute slot includes screen switching and handoff.

© 2026 Inspire | Confidential

Explain One Relationship

Four minutes per author, including switching and handoff

Question about this relationship: _____

Author	Read the relationship and explain what you mean.	
Listener	“So you mean…”	Check with the author.

What supports the claim? What do you still need to find out?
Keep the discussion on the relationship being shown.

© 2026 Inspire | Confidential

Feedback on the Maps We Saw

First understand the expression. Then examine the claim.

What was clear?	Point to the concepts and linking words.
What needs a closer look?	Clarify the meaning, scope or supporting experience.
What remains a question?	Keep it in ParkingLot for later investigation.

Use the actual maps and questions. Keep differences in experience and understanding visible.

© 2026 Inspire | Confidential

After Lunch:
A Software Change

Clarify the request. Make a change.
Check the result. Use the feedback.

Keep your map and questions. Return to them as we gain experience.

© 2026 Inspire | Confidential

The Code Runs.
Is the Change Complete?

AI has produced working code.
What else do we need to know?

Think for 15 seconds. Explain what you would check, and against what.

© 2026 Inspire | Confidential

Four Steps in a Software Change

Start with a need. Keep checking what the change is meant to achieve.

01

Clarifying a request

Agree on the need and expected results.

02

Changing software

Understand the code. Make the change.

03

Checking results

Compare actual results with expectations.

04

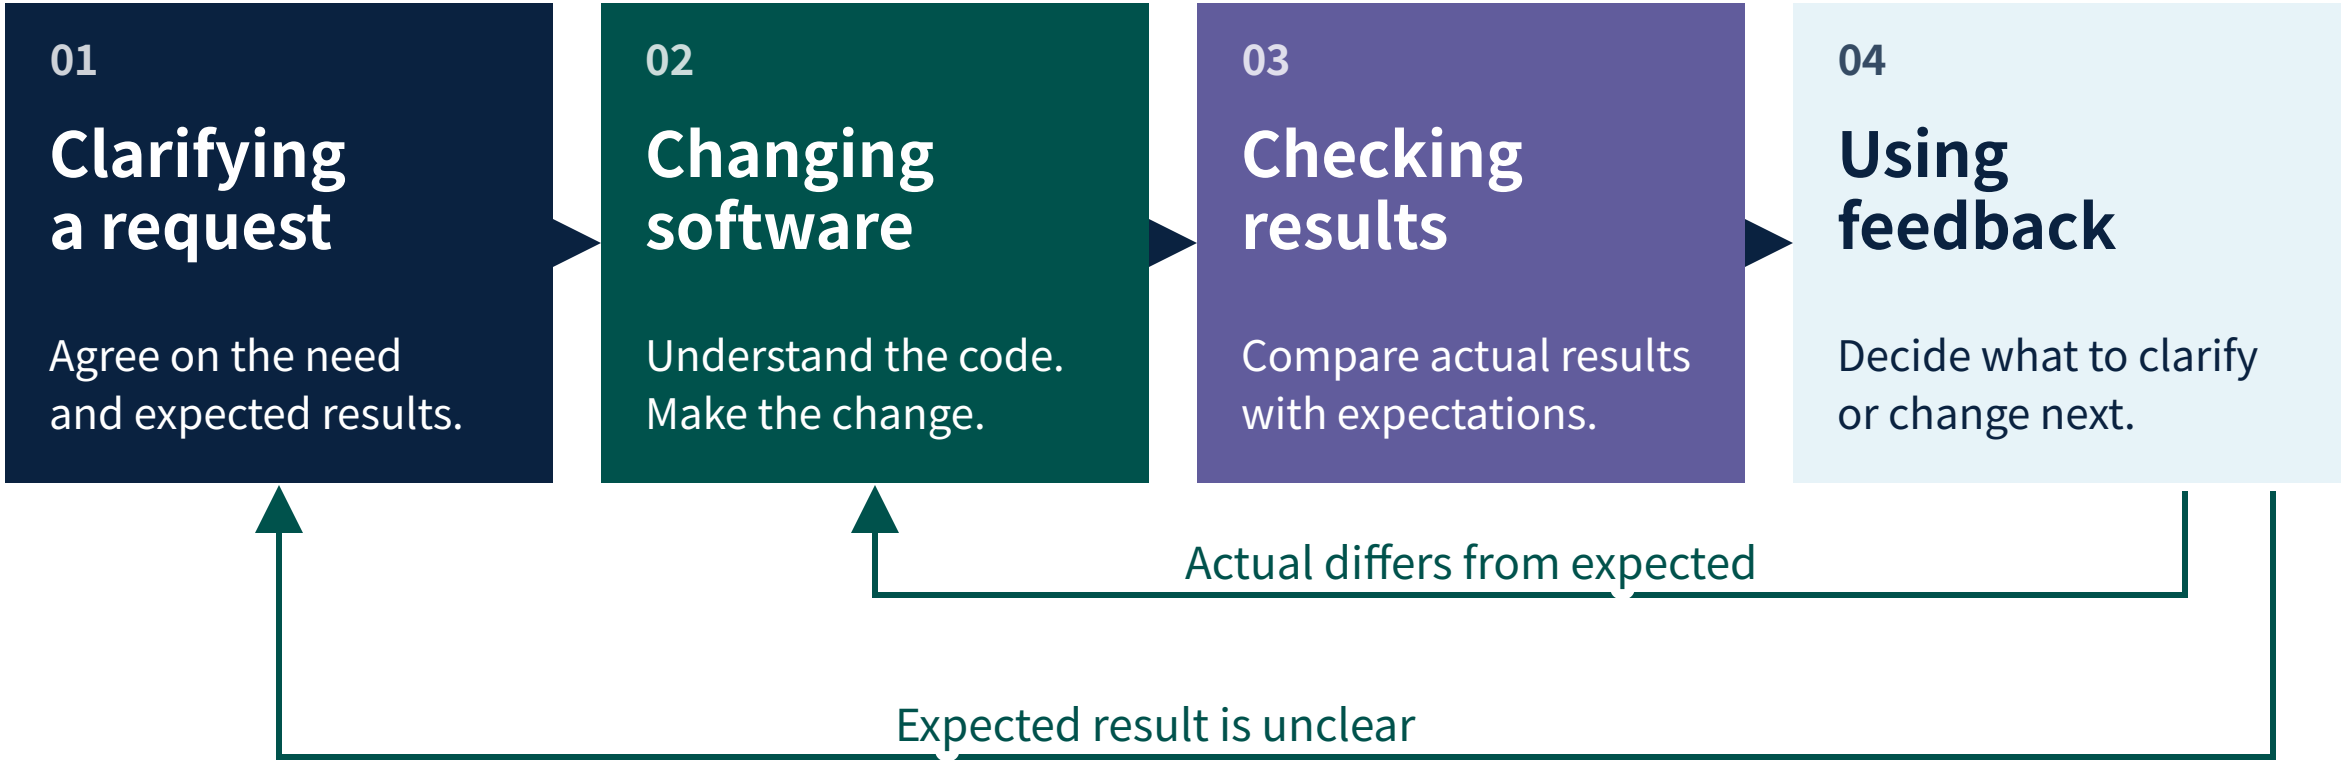

Using feedback

Decide what to clarify or change next.

We will practise these connected steps throughout the course.

© 2026 Inspire | Confidential

Feedback Decides the Next Step

A new need starts another round of clarification, change and checking.

© 2026 Inspire | Confidential

We Know What It Produced. What Should It Produce?

Which step would you return to?
Why?

Think for 15 seconds, then explain your choice.

© 2026 Inspire | Confidential

The Quote Story and Acceptance Criteria

User story

As a	shop clerk
I want	**a clear price breakdown from the original price and membership status**
So that	I can explain the goods and shipping charges to the customer.

Source story: US-00

Acceptance criteria

US-00-AC01	**Nonmember** Use the original price.
US-00-AC02	**Member** Use 80% of the original price, rounded half up to cents.
US-00-AC03	**Promotion** No promotion yet; goods equal the member price.

Selected criteria for US-00 • rules, not recorded test results

AC means acceptance criteria: the conditions the quote must satisfy. US-00 is our baseline.

© 2026 Inspire | Confidential

The Quote Story and Remaining Criteria

User story

As a	shop clerk
I want	**a clear price breakdown from the original price and membership status**
So that	I can explain the goods and shipping charges to the customer.

Source story: US-00

Acceptance criteria

US-00-AC04	**Shipping** Charge 10.00 when the original price is greater than zero.
US-00-AC05	**Zero original price** All amounts are zero.
US-00-AC06	**Breakdown** Show all six amounts; total equals goods plus shipping.

Selected criteria for US-00 • rules, not recorded test results

Scope: calculate and display one quote. Order creation and payment are outside this program.

© 2026 Inspire | Confidential

QuoteApp: Read, Calculate, Print

QuoteApp.java — Java • main • lines 12–19

```
12  for (String arg : args) {
13      if (arg.startsWith("price=") && price == null) {
14          price = arg.substring("price=".length());
15      } else if (arg.startsWith("is_member=") && member == null) {
16          member = arg.substring("is_member=".length());
17      } else {
18          throw new IllegalArgumentException(USAGE);
19      }
```

QuoteApp.java — Java • main • lines 25–26

```
25  var quote = new QuoteCalculator().calculate(Money.amount(price),
    Boolean.parseBoolean(member));
26  System.out.print(new QuotePrinter().format(quote));
```

Follow the two input arguments, then the calls that calculate and print the quote.

© 2026 Inspire | Confidential

QuoteCalculator: Calculate the Amounts

QuoteCalculator.java Java • main • lines 4–12

```java
public Quote calculate(BigDecimal original, boolean member) {
    if (original.signum() == 0) {
        BigDecimal zero = Money.amount("0.00");
        return new Quote(original, zero, zero, zero, zero, zero);
    }
    BigDecimal memberPrice = Money.memberPrice(original, member);
    BigDecimal promotion = Money.amount("0.00");
    BigDecimal goods = memberPrice.subtract(promotion);
    BigDecimal shipping = Money.amount("10.00");
```

src/main/java/training/quote/QuoteCalculator.java

The method receives the original price and membership status and returns quote details.

© 2026 Inspire | Confidential

QuotePrinter: Format the Breakdown

QuotePrinter.java Java • main • lines 3–11

```java
public String format(Quote quote) {
    String text = "Order quote\n"
            + "original=" + quote.original() + "\n"
            + "member_price=" + quote.memberPrice() + "\n"
            + "promotion=" + quote.promotion() + "\n"
            + "goods=" + quote.goods() + "\n"
            + "shipping=" + quote.shipping() + "\n"
            + "total=" + quote.total() + "\n";
    return text;
```

src/main/java/training/quote/QuotePrinter.java

QuoteApp prints this formatted text to the screen.

© 2026 Inspire | Confidential

Run the Quote Program

Run from the project folder containing pom.xml.

Command

```
./run.sh price=50.00 is_member=true
```

Output

```
Order quote
original=50.00
member_price=40.00
promotion=0.00
goods=40.00
shipping=10.00
total=50.00
```

Windows: run.cmd price=50.00 is_member=true

© 2026 Inspire | Confidential

What Does the Clerk Need to Explain to the Customer?

What does the clerk enter?
What does the price breakdown help explain?

© 2026 Inspire | Confidential

Understand the Program Before Changing It

Next, we will draw its boundary from the current code.

Responsibility

What does it do?

Inputs

What does it receive?

Outputs

What does it produce?

Outside its scope

What is explicitly excluded?

First: a Cute Number example. Then: your own map of the quote program.

© 2026 Inspire | Confidential

Context Map: Explain a Program’ s Boundary

Treat the whole program as one box.

Responsibility

What does it do?

Inputs

What does it receive?

Outputs

What does it produce?

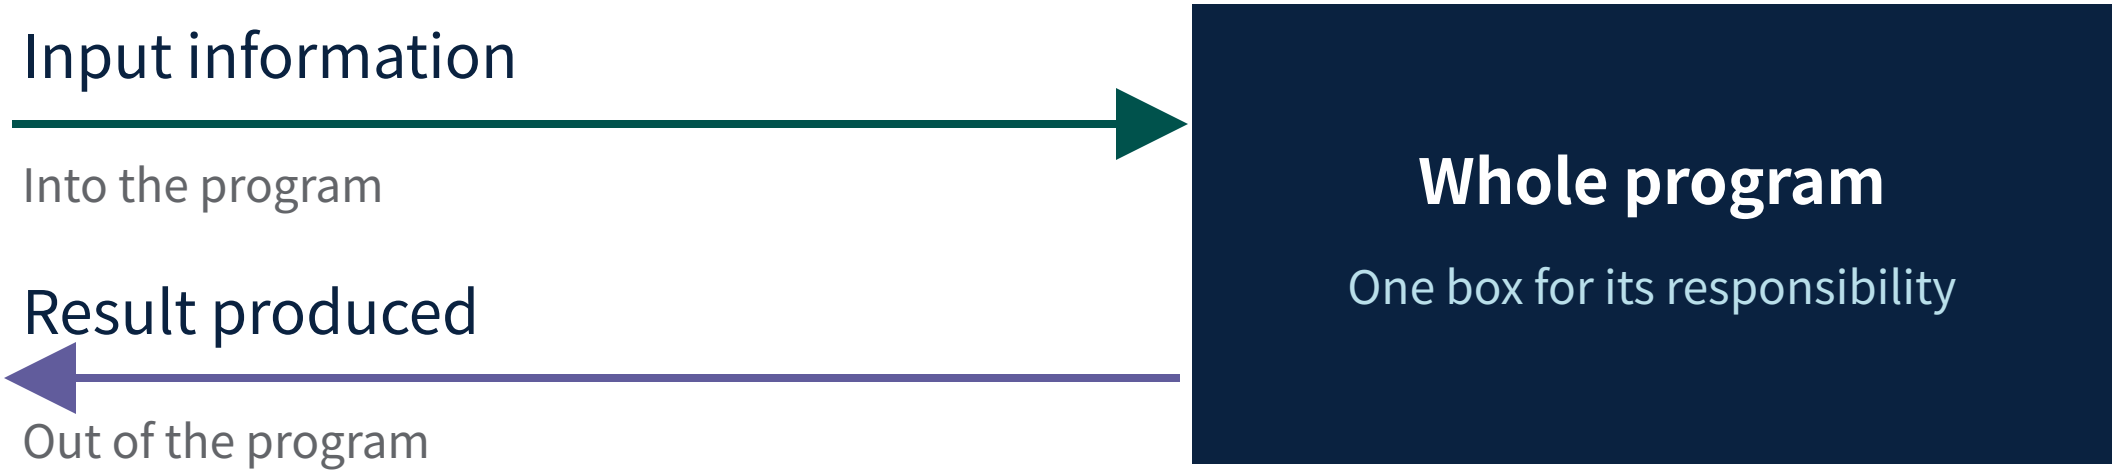

Outside its scope

What is explicitly excluded?

Use the code and known background to explain what belongs on the map.

© 2026 Inspire | Confidential

Read the Arrow Direction

Confirmed exclusions belong beside the map. Keep unresolved points as questions.

Input points into the box. Output points away. Either can be drawn on either side.

© 2026 Inspire | Confidential

Use the Code as Evidence

Classes and methods help us find evidence for the whole program’s boundary.

QuoteApp.java	Where does information enter?
QuoteCalculator.java	What does the program calculate?
QuotePrinter.java	What information is printed?

The morning’s concept map connected ideas. This map explains a program’s boundary.

© 2026 Inspire | Confidential

Cute Number

Given a list of numbers, find the **largest even number** and decide whether it is **greater than 10**.

checkCuteNumber

Largest even number > 10?

© 2026 Inspire | Confidential

Input: A List of Numbers

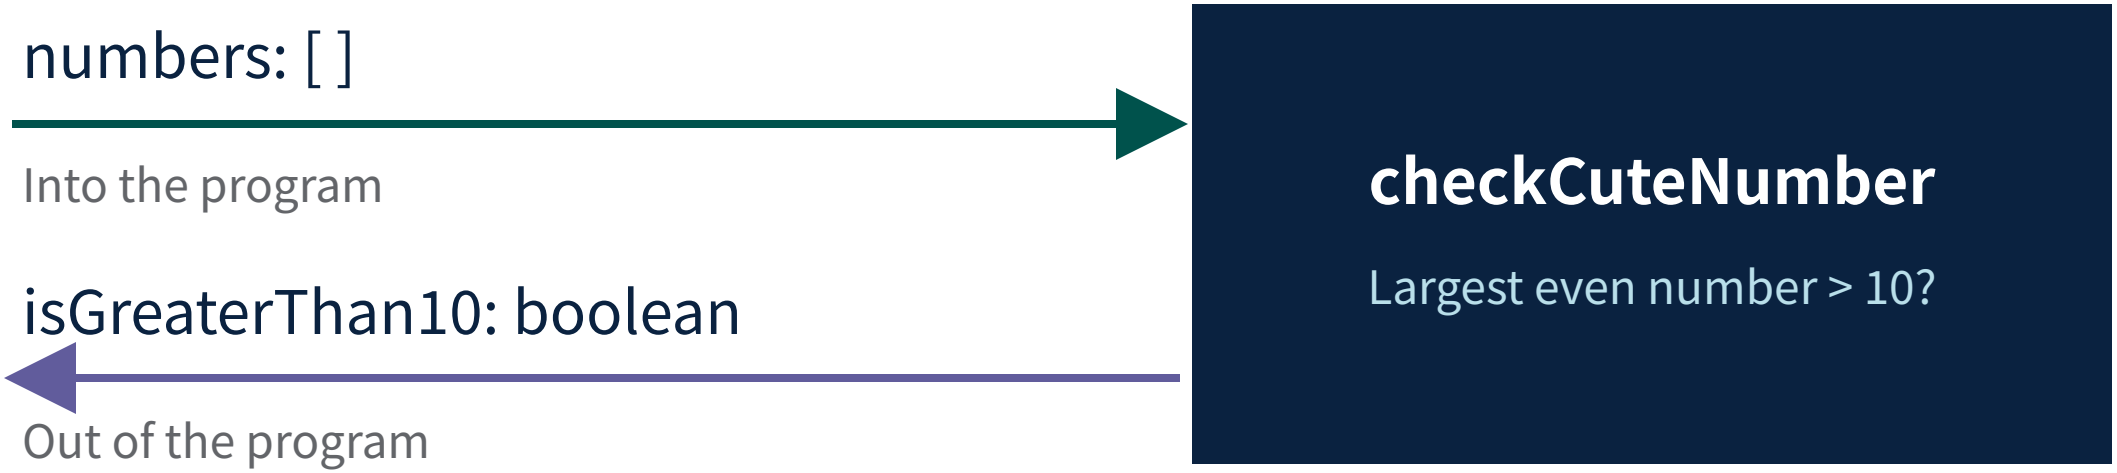

For example: `[3, 8, 12]`

The caller supplies the list. The program finds the largest even number.

© 2026 Inspire | Confidential

Output: A True or False Answer

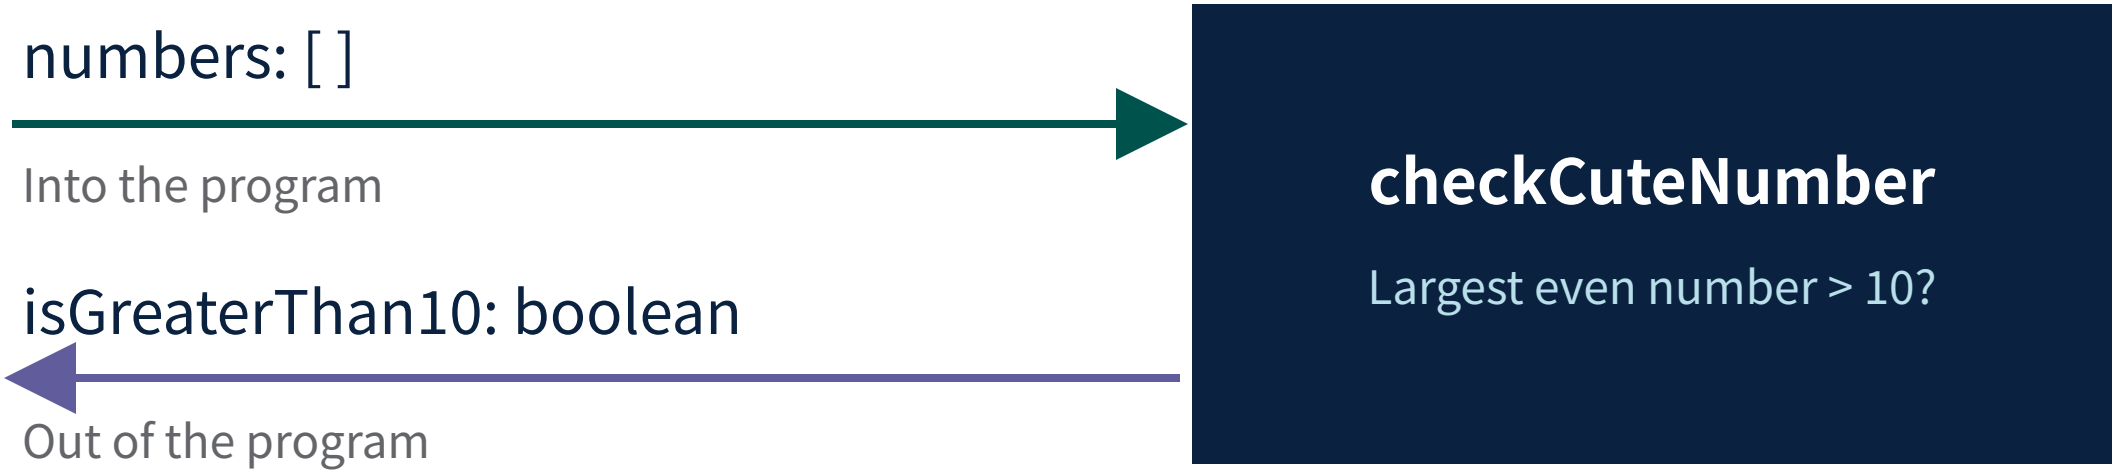

`[3, 8, 12]` → largest even number: `12` → expected: `true`

A paper example, not a recorded run. The largest even number is an intermediate value.

© 2026 Inspire | Confidential

What If There Is No Even Number?

Open question: the task has not specified this case.

Keep known inputs and outputs separate from assumptions that still need confirmation.

© 2026 Inspire | Confidential

Draw Your Own Map of the Quote Program

8 min Read and draw individually

4 min Check together, revise your own map

1. Use one box for the whole program and its responsibility.
2. Label its inputs and outputs. Find evidence in the code.
3. Add confirmed exclusions. Mark unresolved points with a question mark.

Use your prepared main project and US-00.
Read QuoteApp.java, QuoteCalculator.java and QuotePrinter.java at your own pace.

Create a new Excalidraw canvas or use the blank template. Keep your morning concept map.

© 2026 Inspire | Confidential

Choose One Point to Check

Which label or piece of evidence would you like to clarify?

Check your labels. Bring one specific question to your group.

If your map is unfinished, bring what you have and the question you are working on.

© 2026 Inspire | Confidential

Check One Point in Your Group

8 min Read and draw individually

4 min Check together, revise your own map

1 Choose one unclear label or question.

2 Return to the code or the known background.

3 Explain the evidence. Keep unanswered questions visible.

Work in your existing group. If there is no question, check the evidence for one label.

© 2026 Inspire | Confidential

Check, Revise and Save Your Own Map

1. Keep labels that the evidence supports.
2. Correct inaccurate labels and check related parts.
3. Save your editable map. Keep open questions.

A correct label can stay as it is. If you worked on paper, keep your drawing.

© 2026 Inspire | Confidential

Keep the Map for the First AI Change

Which behaviour changes?
Which existing behaviour must keep working?

Use your map to explain what you notice.

© 2026 Inspire | Confidential

The Promotion Story and Original AC

User story

As a	customer
I want	**eligible orders to receive the promotion, including member orders**
So that	I get a quote that follows the shop’ s promotion rules.

Source story: US-01

Original acceptance criteria

US-01-AC01	Orders of 100 or more can join the promotion. Members can join too.
US-01-AC03	Eligible orders receive 20 off.
US-01-AC04	Show the promotion discount and calculate goods payable and total payable correctly.

Selected criteria for US-01 • rules, not recorded test results

Use your context map: which outputs could this request change?

© 2026 Inspire | Confidential

What Will the AI Receive?

> Take 20 off an order of 100 or more. Members can join too. Keep everything else unchanged.

Original request • US-01

Attach the original story, the original AC on the previous page, the known baseline rules and the current project. AC means acceptance criteria: the conditions for accepting a change.

© 2026 Inspire | Confidential

Which Amount Does the Threshold Use?

Think for 10 seconds.
Name one possible meaning that could change the result.

Keep your interpretation as a question until the requester confirms it.

© 2026 Inspire | Confidential

Observe the First AI Attempt

```
Implement the attached promotion request in this project.
Use the attached story, AC and known baseline rules.
Keep other behaviour and the run entry points.
Explain your business assumptions or questions.
Change project files only. Do not stage or commit files
or change Git history.
```

Follow the live tool. If it asks a question, save the question. A runnable change may not be ready.

© 2026 Inspire | Confidential

Save What Actually Happened

1. Save the prompt, reply and current code copy outside the repository.
2. Record the location, save time and unfinished work.
3. Keep the initial Git baseline. Leave changes unstaged and uncommitted.

Stop this attempt in time for checking. Further business changes belong in the next demonstration.

© 2026 Inspire | Confidential

Check the Saved Candidate Independently

Run in the saved project folder containing pom.xml.

```
./run.sh price=125.00 is_member=true
./run.sh price=124.99 is_member=true
```

Save the actual output. On Windows, use run.cmd with the same arguments. If there is no changed candidate, keep the AI’ s questions and ask the requester.

© 2026 Inspire | Confidential

What Happens Around the Threshold?

1. Read member_price, promotion and goods in the actual output.
2. Compare the two runs if both completed. Keep an unrun input unchecked.
3. Ask the requester which amount should decide the promotion.

The output shows what this candidate did. Confirm the intended rule before judging it. A build or run error gives no amount to compare.

© 2026 Inspire | Confidential

Ask the Requester Which Meaning Applies

Does this member order receive the promotion?
Which amount decides eligibility?

1. Record the actual answer, requester, time and example ID.
2. Keep an unanswered question open. Check the source if answers conflict.

An observed amount tells us what the program did. The requester’ s answer supports what it should do.

© 2026 Inspire | Confidential

Which Evidence Are You Using?

Identify one AI interpretation,
one observed result and
one requester decision.

Save the first attempt, logs, answers and open questions. After the break, use the same record to clarify the request.

© 2026 Inspire | Confidential

Specification by Example

Business people, developers and testers use concrete examples to agree on how software should behave.

Keep the agreed rules and examples as a checkable specification. Use them during implementation and checking, and update them when the business changes.

© 2026 Inspire | Confidential

Three Steps for Today’ s Clarification

1. **Make the rule concrete.** State the conditions and discuss the expected result.
2. **Find hidden meanings.** Compare interpretations, ask questions and record real answers.
3. **Write a clear specification.** Keep confirmed rules, examples, counterexamples and sources together.

Repeat the steps when a new example reveals another missing condition. Unsupported results remain assumptions.

© 2026 Inspire | Confidential

Start Just Below the Threshold

Given	Original price **99.99**		Member **No**	
When	Calculate the quote.			
Then Expected result	Original price **99.99**	Member price **99.99**	Promotion **0.00**	Goods payable **99.99**
	Shipping fee **10.00**	Total payable **109.99**		

Observation: Not recorded

Source example: US-01-E02

Reference expected result. Ask the requester first; record the actual answer and source.

© 2026 Inspire | Confidential

Does “100 or More” Include Exactly 100?

Given	Original price **100.00**		Member **No**	
When	Calculate the quote.			
Then Expected result	Original price **100.00**	Member price **100.00**	Promotion **20.00**	Goods payable **80.00**
	Shipping fee **10.00**	Total payable **90.00**		

Observation: Not recorded

Source example: US-01-E03

Compare with the previous input. These are paper expectations, not observed program results.

© 2026 Inspire | Confidential

Add Membership: Which Amount Counts?

Given	Original price **120.00**		Member **Yes**	
When	Calculate the quote.			
Then Expected result	Original price **120.00**	Member price **96.00**	Promotion **0.00**	Goods payable **96.00**
	Shipping fee **10.00**	Total payable **106.00**		

Observation: Not recorded

Source example: US-01-E04

Being eligible to join does not tell us which amount sets the threshold. Reuse a recorded answer, or ask and record it now.

© 2026 Inspire | Confidential

One Discount or One per Threshold?

Given	Original price **250.00**		Member **No**	
When	Calculate the quote.			
Then Expected result	Original price **250.00**	Member price **250.00**	Promotion **20.00**	Goods payable **230.00**
	Shipping fee **10.00**	Total payable **240.00**		

Observation: Not recorded

Source example: US-01-E07

Reference expected result. Confirm the limit with the requester before using it as an agreed rule.

© 2026 Inspire | Confidential

Keep Each Rule Beside Its Source

Rule or question	Supporting record
Which amount sets the threshold?	Actual answer + requester + time + E04
Is the promotion applied once?	Actual answer + requester + time + E07
What is still unknown?	Keep the question open

Use the original AC and known baseline rules too. A reference example alone is not a classroom confirmation.

© 2026 Inspire | Confidential

Given / When / Then

Given	Original price **100.00**		Member **No**	
When	Calculate the quote.			
Then Expected result	Original price **100.00**	Member price **100.00**	Promotion **20.00**	Goods payable **80.00**
	Shipping fee **10.00**	Total payable **90.00**		

Observation: Not recorded

Source example: US-01-E03

Given: starting conditions. When: the action. Then: the expected result, supported by confirmed rules and known baseline rules.

© 2026 Inspire | Confidential

Can This Example Challenge an Assumption?

Assumption: the original price alone decides eligibility.

Can the member example distinguish this from using the member price?

Think for 20 seconds. State which amount your interpretation uses.

© 2026 Inspire | Confidential

A Counterexample Has an Expected Result

Given	Original price **120.00**		Member **Yes**	
When	Calculate the quote.			
Then Expected result	Original price **120.00**	Member price **96.00**	Promotion **0.00**	Goods payable **96.00**
	Shipping fee **10.00**	Total payable **106.00**		

Observation: Not recorded

Source example: US-01-E04

Reference expected result. Once the requester confirms the rule, this valid input can refute the original-price assumption. A counterexample does not have to be invalid input.

© 2026 Inspire | Confidential

Examples Explain and Test the Meaning

1. A positive example shows where the rule applies.
2. A counterexample challenges a particular assumption.
3. A requester answer gives the rule a source.

These examples do not cover every case. Day 3 will teach systematic ways to find gaps.

© 2026 Inspire | Confidential

Save the Agreement for the Next Change

1. Save the actual questions, answers and rule sources.
2. Keep complete expected results for the selected examples.
3. Keep genuine open questions; do not invent one to fill the template.

Next: give the AI the confirmed information, then compare the same inputs on both saved versions.

© 2026 Inspire | Confidential

What Supports the Expected Result?

Find the recorded requester answer.
Which expected result does it support?

Use the real clarification record. Resolve a required missing answer before relying on it.

© 2026 Inspire | Confidential

Use the Same Inputs on Both Versions

Given each original price and membership status, calculate the quote.

Example	Original	Member?	Member price	Promotion	Goods	Shipping	Total
US-01-E03	100.00	No	100.00	20.00	80.00	10.00	90.00
US-01-E04	120.00	Yes	96.00	0.00	96.00	10.00	106.00

All amounts are expected values. Expected original price equals the input. Actual results: Not recorded.

Reference expectations: check them against today’s requester answers. Keep input and expected values fixed; record each version’s actual output separately.

© 2026 Inspire | Confidential

Name the Two Saved Versions

First attempt	Second attempt
Saved code location	New saved code location
Prompt + save time	Prompt + save time
Actual output: not recorded here	Actual output: not recorded here

Keep the first copy unchanged. If the first attempt produced no change, say so; there is no first AI change to compare.

© 2026 Inspire | Confidential

Give the AI the Confirmed Information

```
Check and correct the promotion in the current project.
Use the original request and AC, confirmed requester
answers, known baseline rules and attached GWT examples.
If the code already meets them, explain why.
Keep member discounts, rounding, zero orders,
the breakdown and this stage's shipping rules.
Change project files only. Do not stage or commit files
or change Git history.
```

Attach the actual confirmed rules and E03 / E04 / E07. The original request is now supported by clearer evidence.

© 2026 Inspire | Confidential

Save the Second Actual State

1. Save the prompt, reply, code copy and time.
2. Record whether code changed or work is unfinished.
3. Keep new questions open and stop additions outside the request.

A recovery copy must keep its source and reason. It cannot stand in for the AI’ s actual result.

© 2026 Inspire | Confidential

Run the Same Independent Check Twice

First saved candidate → CLARIFY-PROMOTION → saved log

Second saved candidate → CLARIFY-PROMOTION → saved log

Use the prepared checking tool on each actual candidate path. Record a missing candidate or execution error before comparing business values.

© 2026 Inspire | Confidential

Capture the Actual Amounts on Each Version

```
./run.sh price=100.00 is_member=false
./run.sh price=120.00 is_member=true
```

Expected	First actual	Second actual
Confirmed rule + example	Not recorded	Not recorded

Keep all six raw fields with the version and command. On Windows use run.cmd. PASS does not supply missing actual amounts.

© 2026 Inspire | Confidential

Check the Existing Behaviour Too

1. Run the prepared FOUNDATION checks on the second candidate.
2. Review member discounts, rounding, zero orders, shipping and the breakdown.
3. State only what the saved logs support.

Both versions may match. The second may still differ or fail to run. Keep the outcome as observed, with its limits.

© 2026 Inspire | Confidential

Which Result Supports Your Conclusion?

Point to one actual field and its rule source.
What remains unchecked?

Save both attempts, the comparison and open questions. After the break, clarify shipping on paper first; the checked project is handed over in the later AI practice.

© 2026 Inspire | Confidential

Clarify the Shipping Request

User story

As a	customer
I want	**eligible orders to have no shipping charge**
So that	I know the final amount after the existing discounts.

Source story: US-02

Original AC • clarify their meaning

US-02-AC04	Orders that qualify for the “free shipping on orders of 100 or more” offer have no shipping charge.
US-02-AC05	Orders that do not qualify keep the existing shipping charge rules.
US-02-AC06	Keep the other discounts unchanged. Show the shipping fee and total payable correctly.

Selected criteria for US-02 • rules, not recorded test results

Original request: “Add free shipping for orders of 100 or more. Keep the other discounts unchanged.” Ask your coach what could change the result; record answers without AI or code.

© 2026 Inspire | Confidential

Ask a Question That Separates Meanings

Could two reasonable meanings
give different results?

> Choose the situation yourself.
> Explain what you need the requester to decide.

Record the actual answer, who answered and when. Keep unanswered questions open.

© 2026 Inspire | Confidential

Separate Answers from Assumptions

Confirmed rule	Which actual answer supports it?
Your interpretation	What are you assuming?
Open question	Which result cannot yet be decided?

Keep the existing membership and promotion rules. Confirm the new shipping behavior with the requester.

© 2026 Inspire | Confidential

Write Your First Shipping Example

Use confirmed rules. Put the supporting requester answer beside your example.

1. Given: Choose the original price and membership status.
2. When: Calculate one quote.
3. Then: Write the expected amounts and explain each calculation.

Produce

Your first shipping example

Individual work with coach feedback • 15 minutes

Source activity: d01-s11

Show the member price, promotion reduction, goods payable, shipping fee and total payable.

© 2026 Inspire | Confidential

Use Feedback to Revise Your Example

Can you explain why each amount is expected?

- Check the conditions, calculation and rule source.
- Apply the feedback to your own record.
- Keep any missing answer beside the affected result.

If you are waiting for feedback, check your calculations or prepare another example. Keep unfinished work visible.

© 2026 Inspire | Confidential

Choose an Example That Tests an Interpretation

More independent work • 15 minutes

Find an allowed order where two interpretations give different results.

- Choose the input and calculate from the confirmed rules.
- Explain which interpretation your counterexample challenges.
- Check what happens at the threshold and just below it.

Choose enough examples to explain the behavior. You do not need every possible combination.

© 2026 Inspire | Confidential

Read Back Your Examples

- Can another person find the input and action?
- How do the rules lead to the shipping fee and total?
- Does the counterexample really separate two meanings?
- Which expected result still needs an answer?

> Revise your record. Ask again where information is missing.

An alternative interpretation is for comparison. It does not become a confirmed rule or an observed result.

© 2026 Inspire | Confidential

Save Your Record for the Showcase

Final 2 minutes • includes display preparation

- Save your examples, requester answers and sources.
- Keep feedback and open questions with your record.
- If selected, open your file or prepare the paper projection.

> Be ready to explain where one expected result came from.

Keep your own record. An example with a question can also help the class learn.

© 2026 Inspire | Confidential

Show Your Shipping Examples

Two authors. One example each.

Open • 1 min	Use the records prepared during practice.
Show and discuss • 8 min	About 3 minutes to explain and 1 minute for feedback per author.
Confirm • 2 min	Keep confirmed results and open questions for the AI task.
Reference review • 4 min	Compare all 11 reference examples with your own record.

Screen switching is included. The instructor may adjust the number of presentations within 15 minutes.

© 2026 Inspire | Confidential

Explain the Example and Its Source

The order	What are the starting conditions?
The expected result	Which amounts should the quote show, and why?
The source	Which requester answer supports this judgment?

> Listeners: ask when something is unclear. Check whether the feedback affects your own example.

The instructor gives brief feedback after each example. Unanswered business questions stay open.

© 2026 Inspire | Confidential

Confirm What Will Guide the AI Change

Which rules and expected results
can we now use?

- Display the confirmed shipping conditions and results in your record: these are your AC.
- Keep unresolved questions visible.
- Put the requester answer and supporting example beside each criterion. Save the record.

After the break: use confirmed rules and examples to add shipping, then check the actual result.

© 2026 Inspire | Confidential

Reference Examples: Nonmember Orders

Given each original price and membership status, calculate the quote.

Example	Original	Member?	Member price	Promotion	Goods	Shipping	Total
US-02-E01	95.00	No	95.00	0.00	95.00	10.00	105.00
US-02-E02	110.00	No	110.00	20.00	90.00	10.00	100.00
US-02-E03	119.99	No	119.99	20.00	99.99	10.00	109.99
US-02-E04	120.00	No	120.00	20.00	100.00	0.00	100.00

All amounts are expected values. Expected original price equals the input. Actual results: Not recorded.

Compare the goods payable with the shipping fee. Which examples distinguish the possible meanings?

© 2026 Inspire | Confidential

Reference Examples: Discounts and Promotion

Given each original price and membership status, calculate the quote.

Example	Original	Member?	Member price	Promotion	Goods	Shipping	Total
US-02-E05	120.01	No	120.01	20.00	100.01	0.00	100.01
US-02-E06	120.00	Yes	96.00	0.00	96.00	10.00	106.00
US-02-E07	125.00	Yes	100.00	20.00	80.00	10.00	90.00
US-02-E08	149.99	Yes	119.99	20.00	99.99	10.00	109.99

All amounts are expected values. Expected original price equals the input. Actual results: Not recorded.

Follow the member discount and promotion before judging shipping. Compare these results with your own examples.

© 2026 Inspire | Confidential

Reference Examples: Free and Empty Orders

Given each original price and membership status, calculate the quote.

Example	Original	Member?	Member price	Promotion	Goods	Shipping	Total
US-02-E09	150.00	Yes	120.00	20.00	100.00	0.00	100.00
US-02-E10	250.00	No	250.00	20.00	230.00	0.00	230.00
US-02-E11	0.00	Yes	0.00	0.00	0.00	0.00	0.00

All amounts are expected values. Expected original price equals the input. Actual results: Not recorded.

Compare these references with your requester answers. Resolve conflicts before the AI task; keep your original work and feedback.

© 2026 Inspire | Confidential

The Shipping Story and Acceptance Criteria

User story

As a	customer
I want	**eligible orders to have no shipping charge**
So that	I know the final amount after the existing discounts.

Source story: US-02

Clarified AC • check your answers

US-02-AC01	Original price above zero; goods payable 100 or more: shipping is 0.00.
US-02-AC02	Original price above zero; goods payable below 100: shipping is 10.00. Exclude shipping and total payable from eligibility.
US-02-AC03	Use goods payable after member and promotion discounts, not the original price or member price.

Selected criteria for US-02 • rules, not recorded test results

Compare these criteria with your requester answers and sources. Resolve conflicts before implementation. Keep the other confirmed rules, including empty-order behavior.

© 2026 Inspire | Confidential

Write Your Own AI Instructions

- Use your initial Day 1 repository. Copy the checked promotion project files only; keep Git history and leave changes uncommitted.
- Give AI the confirmed story, criteria and behavior examples.
- Ask it to implement the change and run the project.
- Save your instructions and the revised version.

> What assumptions did AI make? Which ones need checking?

Use the approved AI access and prepared environment. The coach can help with tool problems.

© 2026 Inspire | Confidential

Check Expected and Actual Results

Independent checking and necessary correction • 10 minutes

1. Run the independent shipping checker on your candidate.
2. Choose one result: explain its input, expected result, actual result and conclusion.
3. If there is a mismatch, give AI the specific evidence and check again.

> If all checks pass, finish. No extra revision is required.

AI saying “done” and the candidate's own tests do not replace the independent example check.

© 2026 Inspire | Confidential

Discuss One Checked Example in Your Group

Group feedback and personal conclusion • final 5 minutes

Expected	Which confirmed rule supports it?
Actual	What did this checked version produce?
Conclusion	What does this result support?

> Each person checks their own conclusion after feedback: revise it, or explain why it still holds.

Keep individual records. Group discussion does not establish that every person's version passed.

© 2026 Inspire | Confidential

Save What Actually Happened

- Keep your actual source version and AI instructions.
- Save check records outside the repository.
- Record failures, tool help, recovery use and open questions.

> A recovery result is useful evidence.
> Keep it distinct from your independent attempt.

Stop when time is up. If AI made a commit, preserve it and record what happened.
Day 2 uses separate Git practice code; keep your personal history as it is.

© 2026 Inspire | Confidential

What Did You Learn Today?

“I learned a lot.”
“Tomorrow I will try harder.”

> What happened? What will you actually change?

© 2026 Inspire | Confidential

ORID: Move from Experience to Action

A focused conversation uses questions in a useful order.

1. **O • Objective** — What happened?
2. **R • Reflective** — How did you respond?
3. **I • Interpretive** — What does it mean to you?
4. **D • Decisional** — What will you do next?

From ICA's Focused Conversation method. Here we use it for personal learning and group sharing.

© 2026 Inspire | Confidential

O • Describe What Happened

Return to what you saw, heard or did.

- Which activity? What happened?
- What did you write or hear?
- What results are in your record?

> “The coach asked me what the shipping fee was.”

Use specific details. Check your notes, or say when you are unsure.

© 2026 Inspire | Confidential

R • Notice Your Response

Recall your immediate feelings, reactions or associations.

- What surprised, pleased, confused or worried you?
- What did the experience remind you of?

> “I was surprised when the coach asked.”

Different people can respond differently. Calm or no strong emotion is also a real response.

© 2026 Inspire | Confidential

I • Explain What You Learned

Connect the experience to a change in understanding.

- What did you discover?
- Which assumption needs to change?
- Why does this matter for your next task?

> “I had treated the total as the whole result.”

Link your explanation to the facts. If a cause is uncertain, say so.

© 2026 Inspire | Confidential

D • Choose a Next Action

Use the learning to decide what to keep or change.

- What can you do yourself?
- When will you start?
- How will you check that you did it?

> “Before my next example, I will list the results I need to observe.”

You can keep a useful habit, check information or ask for support.

© 2026 Inspire | Confidential

A Feeling or an Interpretation?

“I feel that checking only the total is not enough.”

> Is this mainly a feeling or an interpretation? Why?

O: the event → R: your response → I: your understanding → D: your next action.

© 2026 Inspire | Confidential

One Experience • O: What Happened

Hypothetical learning experience • an illustration, not a classroom record

“When I wrote a behavior example, I recorded only the total. The coach asked, ‘What is the shipping fee?’ I checked the requirements and added the goods amount and shipping fee.”

> Specific actions, a question and a change to the record.

© 2026 Inspire | Confidential

Same Experience • R: My Response

Hypothetical learning experience

“At first I felt confident that I had finished. The question surprised me, and I worried that I had missed a requirement. After adding the amounts, I felt more at ease.”

> This describes the person’ s response to the event.

© 2026 Inspire | Confidential

Same Experience • I: My Learning

Hypothetical learning experience

“I had treated the total as the whole result. The same total can have different goods and shipping amounts. Before writing an example, I need to find which results the requirements ask me to observe.”

> The missing amounts led to a change in how I understand the task.

© 2026 Inspire | Confidential

Same Experience • D: My Next Action

Hypothetical learning experience

“Before writing my next behavior example, I will list the results to observe from the confirmed requirements. After the first example, I will check it against my list for missing results.”

> A clear action, a starting point and a way to check it.

© 2026 Inspire | Confidential

Tell One Connected Story

Hypothetical example • a spoken version for a standup

“Yesterday I recorded only the total in an example. The coach asked about shipping, so I checked the requirements and added the other amounts. I was surprised, then felt more at ease.

I realised I had treated the total as the whole result. Today, before my next example, I will list the results to observe and check my first example for missing items.”

Keep one event, your response, one insight and one action. The four parts can have different lengths.

© 2026 Inspire | Confidential

Does This Action Follow from the Learning?

"Today I will read more Java code."

> How does this address the missing results?
> What needs to be more specific?

Use the discovery to choose the next action.

© 2026 Inspire | Confidential

Prepare One Real Experience for Tomorrow

1. Choose a success, difficulty, piece of feedback or change in understanding from today.
2. Check your notes. Work through O → R → I → D for that one event.
3. Write your own reflection in records/orid.md. Prepare to speak for about one minute.

> What happened? → My response? → My learning and its basis? → When, what and how to check?

Submit records/orid.md with tonight’ s homework. No word count is required.

© 2026 Inspire | Confidential

Share and Listen in Your Group

- Everyone has a turn tomorrow. Your coach will arrange turns and brief feedback.
- Choose how much personal feeling to share. You may state in R that you prefer not to share it.
- Listen first. Ask “What happened?” or “What will you do first?” when clarification helps.

> Next: tonight’s homework and three submission files.

Day 2–14: ORID standups. From Day 15, Iteration 0: project progress, plans and blockers. Longer technical questions can follow with your coach.

© 2026 Inspire | Confidential
