Day 7 Homework: Persist Quote Templates

Individual homework · 45 minutes total · No AI assistance

Start from the separate supplied Day 7 project, with template CRUD and tests already working in memory.

1. Run the baseline and add a POST database storage test.
2. Add `V2__create_quote_templates.sql` and JPA mapping.
3. Replace the Service and test-fixture memory dependencies with a Spring Data repository.

Use your classroom code as a reference. Keep your Day 6 submission and classroom project intact.

Storage Test and Regression

- Use the POST response id to check one database row and all template fields. Do not seed the target.
- Run the new storage test, all nine supplied template example groups and the quote regressions.
- Keep V1, existing quote data and API behavior unchanged. No extra restart check is required.

> **Bonus: Refactor the implementation**
> After the required work, improve the code structure. Preserve API behavior and pass regression tests within the same 45 minutes.

Submission Checklist

Project code, migration and tests

V2, JPA mapping, repository, Service/fixture changes and tests.

`records/orid.md`

Personal Day 7 reflection in four sections and your next action.

Commit and push to your assigned individual homework repository.
Submit by 22:00 on the training day (Asia/Shanghai).

45 minutes total: code, tests, ORID, bonus and submission. Mark unfinished work.

Your Day 7 ORID Reflection

Write it yourself in `records/orid.md`. Use it for the Day 8 group standup.

O · Objective	What happened? What did you do or observe?
R · Reflective	How did you feel?
I · Interpretive	What did you learn? What does it mean to you?
D · Decisional	What will you do next?

No word count requirement. You may say in R that you prefer not to share your feelings.
