HOMEWORK

Prepare for the TDD Homework

© 2026 Inspire | Confidential

Homework: Member Free Shipping

Member goods payable ≥ 80 yuan → free shipping

Change only the free-shipping threshold for nonempty member orders.

Below 80 yuan → shipping stays 10 yuan

Keep ordinary customer rules, empty orders, all US-04 promotion bands and rounding unchanged.

TDD • 60 minutes • no AI

Check business scenarios and existing tests. Update expectations and observe Red before changing production code; then implement and run regression. Include your own ORID reflection within the same time limit.

Continue your latest personal classroom project. Submit code, tests, Git history and records/orid.md.

The Assigned Acceptance Criterion

US-05-AC01	For a member order with a positive original price, shipping is free when goods payable reaches 80 yuan.

Selected criteria for US-05 • rules, not recorded test results

The shipping fee below the threshold stays at 10 yuan.

Before viewing the reference, spend 6 minutes asking relevant questions and writing your own inputs, actions and expected results in your existing notes.

© 2026 Inspire | Confidential

Write Your Own Examples First

Derive examples from the request and acceptance criterion.

1. Ask questions that affect the expected results.
2. Use equivalence classes and boundary values to choose inputs.

Produce

Inputs, actions and expected results in your existing notes.

6 minutes • this step

Source activity: d03-s17/clarify-and-author

Compare with the reference after your own attempt.

Reference: Below and At the Threshold

Given the original price and membership status, calculate the quote. Amounts in yuan.

Example	Original	Member?	Member price	Promotion	Goods payable	Shipping	Total payable
MEMBER-THRESHOLD-E01	99.99	Yes	79.99	0.00	79.99	10.00	89.99
US-05-E03	100.00	Yes	80.00	0.00	80.00	0.00	80.00

Expected results. Expected original price equals the input. Actual results: Not recorded.

Compare with your notes. Correct differences and keep your reasoning.

Reference: Above the Threshold and After Promotion

Given the original price and membership status, calculate the quote. Amounts in yuan.

Example	Original	Member?	Member price	Promotion	Goods payable	Shipping	Total payable
US-05-E04	100.01	Yes	80.01	0.00	80.01	0.00	80.01
US-05-E05	125.00	Yes	100.00	20.00	80.00	0.00	80.00

Expected results. Expected original price equals the input. Actual results: Not recorded.

These four threshold examples supplement all required US-04 and earlier regression checks.

Analyze Business Scenario Coverage

1 **Check business scenarios**

Check below, at and above the threshold, plus unchanged rules.

2 **Locate existing tests**

Decide which checks to keep, which expectations to update and which missing checks to add.

3 **Identify the assertions**

Use each example to identify setup, the call and assertions.

Reuse existing tests; add missing business scenario checks. No code coverage tool, report or percentage is required. No separate test-case table is required.

US-05-E05: Update an Existing Test

Member order, original price 125.00 yuan

Expected field	Current rule	Homework rule
Member price	100.00	100.00
Promotion	20.00	20.00
Goods payable	80.00	80.00
Shipping	10.00	0.00
Total payable	90.00	80.00

Rule-based expectations, before and after. Actual results: Not recorded.

US-05-E05 reuses the input of US-02-E07. Update Day2CompleteReferenceTest.day2Example11().

Change Assertions, Run, Stop at Red

1 **Confirm old Green**

Run the existing test in a separate demo/tiered-discount trainer copy.

2 **Change the assertions first**

Keep production code unchanged. Set shipping to 0.00 and total to 80.00; update the printed expectations too.

3 **Run the test and stop**

Observe the assertion failure: expected shipping 0.00, actual 10.00. Stop at Red; leave implementation to learners.

Update Day2CompleteReferenceTest.day2Example11(); keep its member input of 125.00 yuan and all other amount assertions.

Submit Your Project and ORID Reflection

- **Project tests**
- **Production code**
- **Git commit history**
- **Personal Day 3 ORID reflection • records/orid.md**

Submit the project with its tests, Git history and records/orid.md. No separate reports, screenshots, test output files or written explanations are required.

Homework Grading Criteria

Small commits

Commit tests and real Red, passing implementation, and any refactoring separately.

Conventional Commits

Use <type>[optional scope]: <description>, for example test:, feat: or refactor:.

Production-code refactoring

Remove obvious duplication; keep regression Green. This criterion excludes test-code refactoring.

Clean tests

Clear behavior names, readable setup, action and assertions; no unrelated checks.

If no useful production refactoring remains, explain why. No empty commit is required. Business behavior and test coverage are assessed from the project. No separate execution evidence is submitted.

Your Starting Version and Class Entries

Your latest personal project

Continue the same personal project in its latest state after the classroom showcase and feedback. Include any changes made after the refactoring activity; do not return to an earlier snapshot. Run the project tests (mvnw.cmd test on Windows; ./mvnw test on macOS or Linux) and identify the current version and any blocker.

Check the starting point

Identify the current version. Run the old suite and locate any blocker.

Individual work. Up to 60 minutes, including ORID. Work without AI. Use the actual task, submission and help entries supplied for your class.

Find your starting version, main-deck reference pages, submission requirements and help route.

Complete the Change and Preserve Earlier Behavior

Task boundaries

Continue your own US-04 work. Run every incremental US-04 reference input and earlier regression tests. Keep promotion expectations and unchanged shipping rules. Migrate only shipping, total and display expectations replaced by the member threshold. Discuss inherited gaps separately from new gaps when asking for help or during the next-day review.

Before production edits

Confirm old Green. Update affected expectations with production unchanged, then observe real Red before implementation. Reuse tests and add only missing business scenario checks. Run regression and keep code, tests and small Git commits. Explain structural choices orally next day; no saved output, screenshots, evidence report or written explanation is required.

Keep the main-deck reference pages available. Discuss classroom gaps separately from this rule change when asking for help.

Write Your Day 3 ORID Reflection

records/orid.md

Summarize your Day 3 experience in four sections using ORID. O (Objective) describes what happened; R (Reflective) describes your feelings; I (Interpretive) explains what you learned and what it means to you; D (Decisional) states your next action.

Privacy and length

Choose how much personal feeling to include. You may state in the R section that you prefer not to share it. There is no word count requirement.

Prepare for the group standup

Write the reflection yourself and use it to prepare for the Day 4 group standup.
